

SIT 130 Pass Task 1 Reflection – Julian Biondo

In this task I created a simple webpage that demonstrated the use of some main HTML tags such as <h1>, <p>, <table> and <form>. I also used some CSS styling techniques, those being inline, internal and external. This was a good introductory task as it refreshed my memory on how HTML and CSS works as I have studied this before. Personally, I really enjoyed learning HTML so I hope that I enjoy practicing it again in this unit and also learning some more advanced techniques.
